

## Pushing collaborative research for social impact

Funding organisations demand an increasingly open and participatory science in collaboration with other agents.

Citizen science is one of the eight pillars of the European Commission's open science policy. The Horizon Europe program considers citizen participation as a key aspect of the excellence criteria for project evaluation and proposes incorporating it together with co-creation in all Clusters and Missions.

National and European support are key steps forward towards collaborative forms of research and innovation.

The inclusion of citizens in research has become a cross-cutting need. Involving different agents increases the impact of projects, expanding the collection of new data and contributing to public policies informed by scientific evidence.

Start your path towards open science with Science For Change

## Don't get left behind and generate impactful research aligned with society!

## How can we help you?

- We offer consulting, mentoring and adhoc training in all our areas of expertise.
- We help you include citizens in your research to address social, environmental and health challenges in a transformative way.
- We promote the **impact** of your research on public policies at the desired level of governance.
- We transform your ideas into European projects and we are also your perfect ally.
